FDA definition of electronic record

Any combination of text, graphics, data, audio, pictorial, or other information represented in digital form that is created, modified, maintained, archived, retrieved, or distributed by a computer system.

Electronic Source Data Collection

- Source and CRF data should be separate.
- Prevalence has increased.
- Benefits:
 - Facilitate collection of accurate, complete data
 - Enter source data during study visit
 - Eliminate transcription of source data
 - Reduce instances of transcription errors
 - Eliminate unnecessary duplication of data
 - Promote real-time access for data review
 - Facilitate remote monitoring of data
 - Provide monitors with the ability to compare source to eCRF

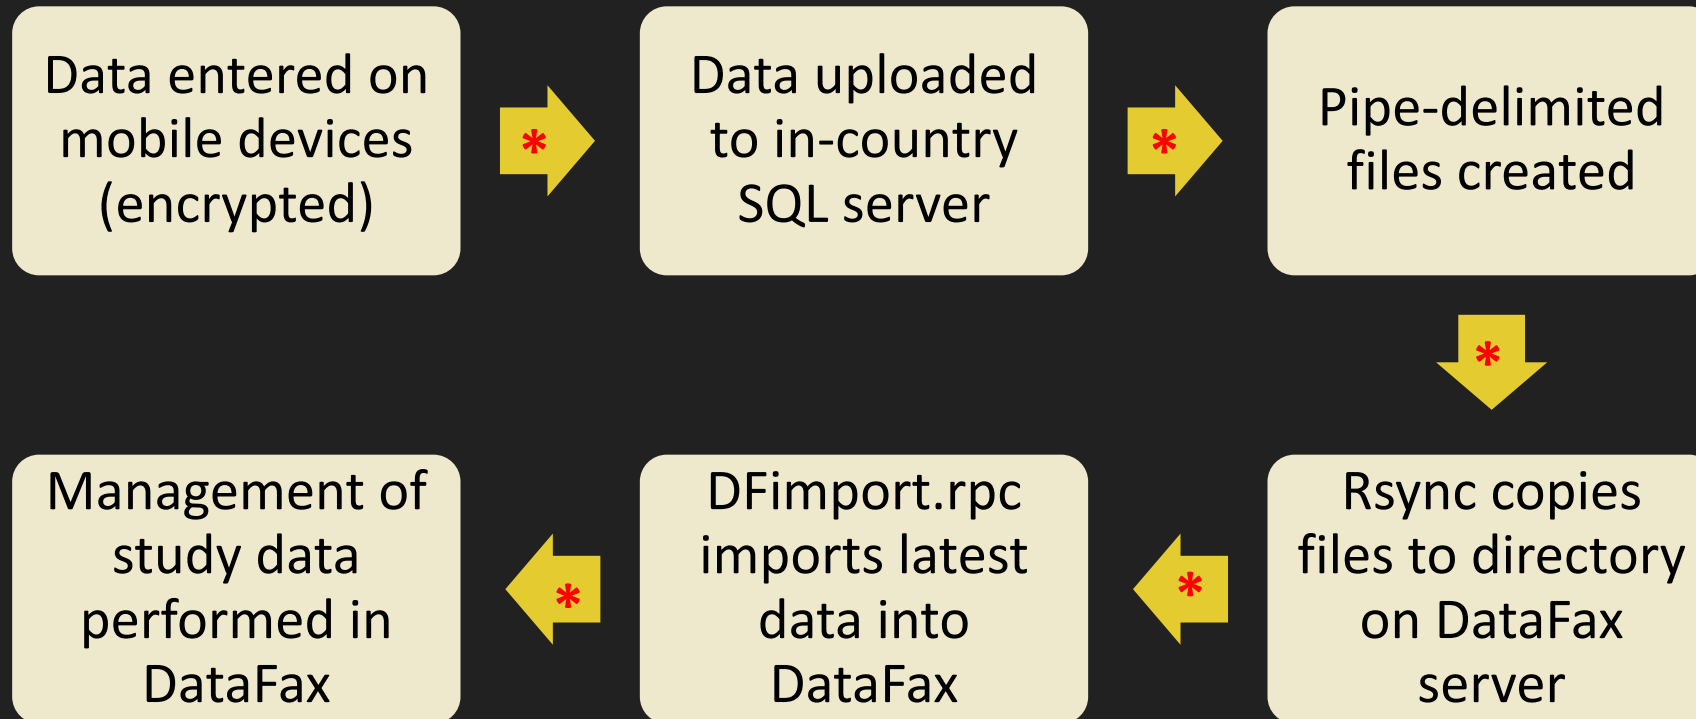

Data Collection

Our solution – V1.0

- **Host country/PI owns source data → Source data must reside in-country**
- **mSource was developed and it enabled:**
 - **Electronic Source Data collection in-country**
 - **Export of pipe delimited files → Imported into DataFax**
 - **Data management using array of tools/reports within DataFax**
- **All user/programmed activity was captured in an audit log.**
- **Increase in Electronic Source Data collection across multiple studies and sites**

Our solution – V1.0 (cont.)

*** Audit trail logging**

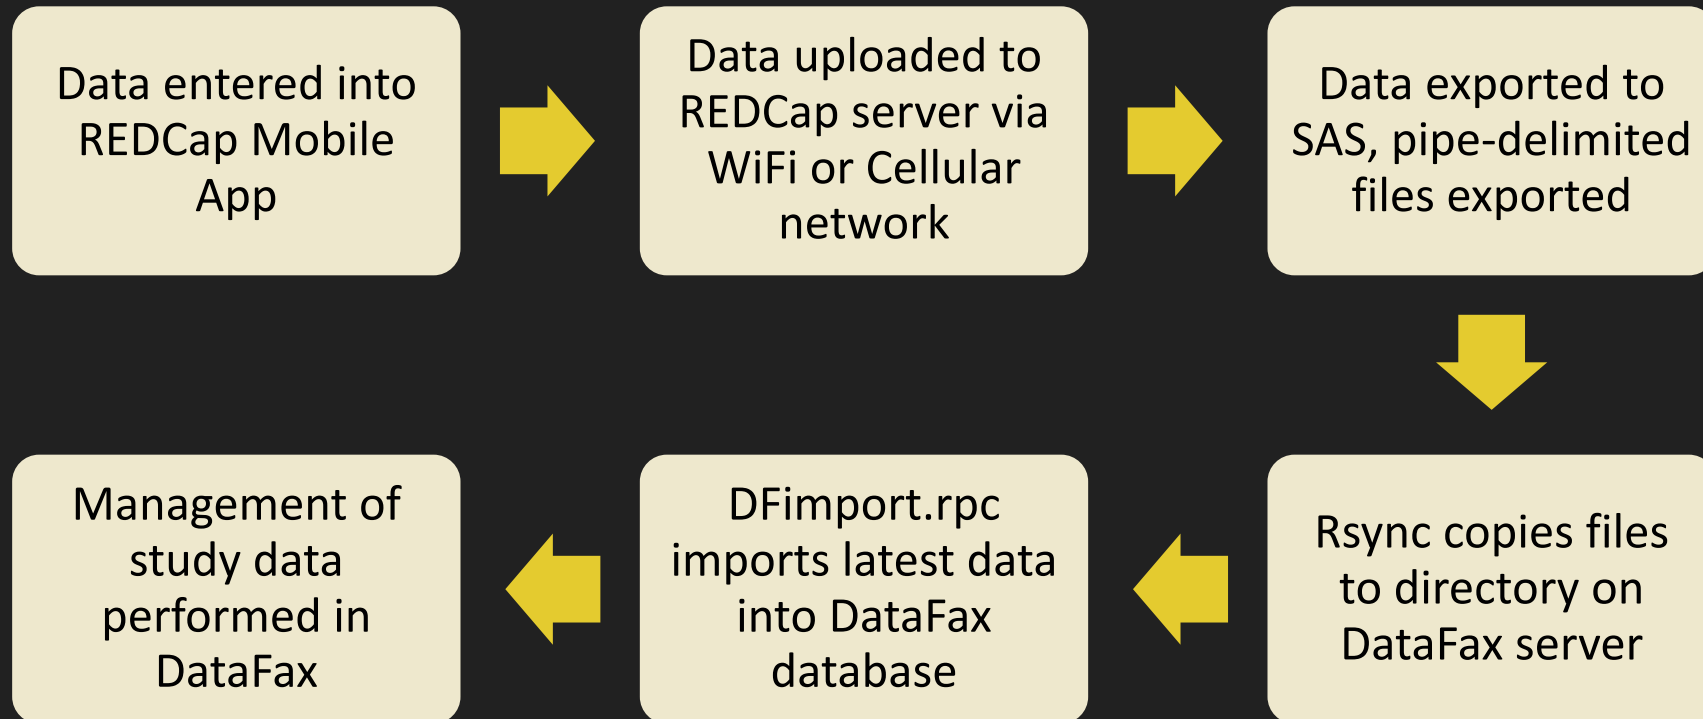

The Limitations of V1.0

- mSource licensing model was complicated and restrictive.
- Integration was labor/time intensive with limited functionality.
- Forms development required specialized, higher level skills.
- Did not have the many of the features and awareness that DataFax did.

Proposed V2.0 solution

- **Must address V1.0 limitations.**
- **Is there a tool currently in use that can be considered?**
 - **Yes → REDCap**

Proposed V2.0 solution – cont.

Proposed V2.0 solution – cont.

Benefits – V2.0 (REDCap)	Limitations – V2.0
More flexibility	Mobile device management
Built-in features	User accounts (device + app, changes)
Better integration	Encryption of data & transfers
Licensing model	Non-approved apps
Server can be in-country	Database update synchronization

Wish list: V3.0 – dfdiscover / dfcollect?

➤ Must address V1.0 & V2.0 limitations/issues:

- Central mobile device management
 - ✓ Accounts
 - ✓ Security
 - ✓ Encryption
- Synchronizing CRF updates with central database/mobile device
- Preserve Host country/PI ownership of data → Data must reside in-country

Acknowledgements

- OCICB
- df/net → We need dfcollect ASAP!
- Project REDCap
